

HO-SERIES COUPLING SUMMARY

The HO-Series hydraulic coupling product line has been developed for general purpose, economical and intermediate pressure applications up to 7500 psi. Constructed of 316 stainless steel, these couplings utilize a single crown seal between mating halves and are primarily used in surface or shallow water applications to 730 meters (2400 ft.). HO-Series coupling designs are tailored to customer mounting and end connection specifications.

Applications

The HO-Series hydraulic couplings are primarily used umbilical junction plate tie-ins to hydraulic power units, shallow water diver and ROV stab connections. They are available in various mounting and end connection configurations.
