

## **M-SERIES COUPLING SUMMARY**

The M-Series hydraulic coupling product line has been developed for surface and subsea manual connection applications requiring high reliability and working pressures of up to 15,000 psi. These manually threaded together couplings are constructed of premium Nitronic stainless steel and feature dual elastomer crown seals between mating halves. Coupling designs are tailored to customer mounting and end connection specifications.

### **Applications**

The M-Series hydraulic couplings are adaptable to a wide range of applications requiring a reliable manual make-up connection.
