

TM-SERIES COUPLING SUMMARY

The TM-Series hydraulic coupling product line has been developed for surface and subsea manual make-up applications requiring the highest possible reliability and working pressures up to 15,000 psi. These manually threaded together couplings are constructed of premium Nitronic stainless steel (standard) and feature our patented field proven metal-to-metal seal and secondary elastomer dovetail crown seal system designed for ease of seal replacement. Coupling designs are tailored to customer mounting and end connection specifications.

Applications

The TM-Series couplings are ideally suited for any applications requiring a high reliability, manual make-up hydraulic connection.
